(54) Title: **METHOD AND APPARATUS FOR PROVIDING A SELECTION LIST OF CONTENT ITEMS**

(57) Abstract: The invention relates to a system for providing a selection list of content items to a user. The content items may comprise video content, audio content and multimedia content including received or recorded TV or radio programmes. An apparatus comprises a content receiver (103) for receiving content items. The content items may be stored in a content memory (105). The apparatus further comprises a duration processor (111), which determines a content item duration indication for each of the content items. A content item list processor (113) generates an ordered content list comprising content items ordered in response to the content item duration indication. The ordered list is presented to the user as a selection list by a user interface (107). The user may select a content item for presentation by highlighting the content item in the selection list. The content item duration indication may relate to a remaining time of a programme.
